A **lyriphoton** is a short creation as a quantum of electromagnetic artistic and poetical energy.

Its energy is equal to $h \cdot \nu$, where $h$ is Plank constant and $\nu$ the frequency of the lyrical wave.

A lyriphoton travels at mind’s infinite speed and with a momentum of $h \cdot \lambda$, where $\lambda$ is the lyrical wave’s length. It has no mass or charge.

The lyriphoton(n)s can produce excitation of the readers and critics, and the most energetic ones can cause the ionization of the mind and vibration of the heart’s cords.

A lyriphoton nuclear reaction occurs when the high-energy lyriphotons collide with an atomic literary nucleus and disintegrate it (lyriphotofission) into words [*lyrics*] and images [*photo(n)*]s. See below.
