**Abstract:** In this paper we define two kinds of pseudo-Smarandache functions. We have investigated more than fifty terms of each pseudo-Smarandache function. We have proved some interesting results and properties of these functions.

**Key Words:** pseudo-Smarandache function, number, prime.

**AMS(2010):** 11P83

### §1. Introduction

The pseudo-Smarandache function  $Z(n)$  was introduced by Kashihara [4] as follows:

**Definition 1.1** For any integer  $n \geq 1$ ,  $Z(n)$  is the smallest positive integer  $m$  such that  $1 + 2 + 3 + \dots + m$  is divisible by  $n$ .

Alternately,  $Z(n) = \min\{m : m \in N : n \mid \frac{m(m+1)}{2}\}$ .

The main results and properties of pseudo-Smarandache functions are available in [3]-[5]. We noticed that the sum  $1 + 2 + 3 + \dots + m$  can be replaced by the series of squares of first  $m$  natural numbers and the cubes of first  $m$  natural numbers respectively, to get the pseudo-Smarandache functions of first kind and second kind.

In the following we define pseudo-Smarandache functions of first kind and second kind.

**Definition 1.2** For any integer  $n \geq 1$ , the pseudo-Smarandache function of first kind,  $Z_1(n)$  is the smallest positive integer  $m$  such that  $1^2 + 2^2 + 3^2 + \dots + m^2$  is divisible by  $n$ .

Alternately,  $Z_1(n) = \min\{m : m \in N : n \mid \frac{m(m+1)(2m+1)}{6}\}$ .

**Definition 1.3** For any integer  $n \geq 1$ , the pseudo-Smarandache function of second kind,  $Z_2(n)$  is the smallest positive integer  $m$  such that  $1^3 + 2^3 + 3^3 + \dots + m^3$  is divisible by  $n$ .

Alternately,  $Z_2(n) = \min\{m : m \in N : n \mid \frac{m^2(m+1)^2}{4}\}$ .

For ready reference we give below some values of  $S(m)$ s and  $Z_1(n)$ s, where  $S(m)$  stands for the sum of the squares of first  $m$  natural numbers and  $Z_1(n)$  stands for the pseudo-Smarandache function of first kind for the value  $n$  for  $n \in N$ .

**Values of  $S(m)$**

$S(1) = 1$	$S(15) = 1240$	$S(29) = 8555$	$S(43) = 27434$
$S(2) = 5$	$S(16) = 1496$	$S(30) = 9455$	$S(44) = 29370$
$S(3) = 14$	$S(17) = 1785$	$S(31) = 10416$	$S(45) = 31395$
$S(4) = 30$	$S(18) = 2109$	$S(32) = 11440$	$S(46) = 33511$
$S(5) = 55$	$S(19) = 2470$	$S(33) = 12529$	$S(47) = 35726$
$S(6) = 91$	$S(20) = 2870$	$S(34) = 13685$	$S(48) = 38024$
$S(7) = 140$	$S(21) = 3311$	$S(35) = 14910$	$S(49) = 40425$
$S(8) = 204$	$S(22) = 3795$	$S(36) = 16206$	$S(50) = 42925$
$S(9) = 285$	$S(23) = 4324$	$S(37) = 17575$	$S(51) = 50882$
$S(10) = 385$	$S(24) = 4900$	$S(38) = 19019$	$S(52) = 48230$
$S(11) = 506$	$S(25) = 5525$	$S(39) = 20540$	$S(53) = 51039$
$S(12) = 650$	$S(26) = 6201$	$S(40) = 22140$	$S(54) = 53955$
$S(13) = 819$	$S(27) = 6930$	$S(41) = 23821$	$S(55) = 56980$
$S(14) = 1015$	$S(28) = 7714$	$S(42) = 25585$	$S(56) = 60116$

**Values of  $Z_1(n)$**

$Z_1(1) = 1$	$Z_1(14) = 3$	$Z_1(27) = 40$	$Z_1(40) = 15$
$Z_1(2) = 3$	$Z_1(15) = 4$	$Z_1(28) = 7$	$Z_1(41) = 20$
$Z_1(3) = 4$	$Z_1(16) = 31$	$Z_1(29) = 14$	$Z_1(42) = 27$

$Z_1(4) = 7$	$Z_1(43) = 21$	$Z_1(17) = 8$	$Z_1(30) = 4$
$Z_1(5) = 2$	$Z_1(18) = 27$	$Z_1(31) = 15$	$Z_1(44) = 16$
$Z_1(6) = 4$	$Z_1(19) = 9$	$Z_1(32) = 63$	$Z_1(45) = 27$
$Z_1(7) = 3$	$Z_1(20) = 7$	$Z_1(33) = 22$	$Z_1(46) = 11$
$Z_1(8) = 15$	$Z_1(21) = 17$	$Z_1(34) = 8$	$Z_1(47) = 23$
$Z_1(9) = 13$	$Z_1(22) = 11$	$Z_1(35) = 7$	$Z_1(48) = 31$
$Z_1(10) = 4$	$Z_1(23) = 11$	$Z_1(36) = 40$	$Z_1(49) = 24$
$Z_1(11) = 5$	$Z_1(24) = 31$	$Z_1(37) = 18$	$Z_1(50) = 12$
$Z_1(12) = 8$	$Z_1(25) = 12$	$Z_1(38) = 19$	$Z_1(51) = 8$
$Z_1(13) = 6$	$Z_1(26) = 12$	$Z_1(39) = 13$	$Z_1(52) = 32$

## §2. Some Results for Pseudo-Smarandache Functions of First Kind

Following results can be directly verified from the table given above.

- (1)  $Z_1(n) = 1$  only if  $n = 1$ .
- (2)  $Z_1(n) \geq 1$  for all  $n \in N$ .
- (3)  $Z_1(p) \leq p$ , where  $p$  is a prime.
- (4) If  $Z_1(p) = n$ ,  $p \neq 3$ , then  $p > n$ .

**Lemma 2.1** *If  $p$  is a prime then  $Z_1(p) = p + 1$ , for  $p = 2$  or  $3$ . Also,  $Z_1(p) = \frac{p-1}{2}$  for  $p \geq 5$ .*

*Proof* For  $p = 2$  and  $3$ , the verification is direct from the above table of  $Z_1(n)$ .

Let  $S = 1^2 + 2^2 + 3^2 + \dots + (\frac{p-1}{2})^2$ . Then  $S = \frac{p(p+1)(p-1)}{24}$ . Hence  $p$  divides  $S$ . Also  $p \nmid \frac{p-1}{2}$  as  $\frac{p-1}{2} < p$ . Let if possible (assumption)  $p \mid 1^2 + 2^2 + \dots + m^2$  where  $m < \frac{p-1}{2}$ . But in that case  $p$  divides every summand of the sum  $S$ . But  $p \nmid (\frac{p-1}{2})^2$ . Hence our assumption is wrong. Thus  $S$  is the minimum. Thus  $Z_1(p) = \frac{p-1}{2}$  □

**Lemma 2.2** *For  $p = 2$ ,  $Z_1(p^k) = p^{k+1} - 1$ .*

*Proof* Straight verification confirms the result. □

**Lemma 2.3**  $Z_1(n) \geq \max\{Z_1(N) : N \mid n\}$ .

*Proof* Notice that in this case values of  $N$  are less than or equal to  $n$  and are divisors of  $n$ . Hence values of  $Z_1(N)$  can not exceed  $Z_1(n)$ .  $\square$

**Lemma 2.4** Let  $n = \frac{k(k+1)(2k+1)}{6}$  for some  $k \in \mathbb{N}$ , then  $Z_1(n) = k$ .

*Proof* The result is the immediate consequence of the fact that no previous value of  $S(n)$  is divisible by  $k$ .  $\square$

**Lemma 2.5** It is not possible that  $Z_1(m) = m$  for any  $m \in \mathbb{N}$ .

*Proof* Let if possible  $Z_1(m) = m$ . Then by definition  $m$  is the smallest of the positive integer which divides  $1^2 + 2^2 + 3^2 + \dots + m^2$ . Hence  $m$  does not divide  $1^2 + 2^2 + 3^2 + \dots + (m-1)^2$ . Let  $1^2 + 2^2 + 3^2 + \dots + (m-1)^2 = k$ . So,  $m$  divides  $k + m^2$ . Hence  $m$  divides  $k$ , a contradiction.  $\square$

**Lemma 2.6**  $S(m) = k$  then  $S(m) = Z_1(2k+1)$ .

Here  $S(n)$  will stand for the sum of the cubes of first  $n$  natural numbers. Please find the table following.

Values of  $S(n)$

$S(1) = 1$	$S(15) = 14400$	$S(29) = 189225$	$S(43) = 894916$
$S(2) = 9$	$S(16) = 18496$	$S(30) = 216225$	$S(44) = 980100$
$S(3) = 36$	$S(17) = 23409$	$S(31) = 246016$	$S(45) = 1071225$
$S(4) = 100$	$S(18) = 29241$	$S(32) = 278784$	$S(46) = 1168561$
$S(5) = 225$	$S(19) = 36100$	$S(33) = 314721$	$S(47) = 1272384$
$S(6) = 441$	$S(20) = 44100$	$S(34) = 354025$	$S(48) = 1382976$
$S(7) = 784$	$S(21) = 53361$	$S(35) = 396900$	$S(49) = 1500625$
$S(8) = 1296$	$S(22) = 64009$	$S(36) = 443556$	$S(50) = 1625625$
$S(9) = 2025$	$S(23) = 76176$	$S(37) = 494209$	
$S(10) = 3025$	$S(24) = 90000$	$S(38) = 549081$	

**Values of  $S(n)$ (continue)**

$S(11) = 4356$	$S(25) = 105625$	$S(39) = 608400$	
$S(12) = 6084$	$S(26) = 123201$	$S(40) = 672400$	
$S(13) = 8281$	$S(27) = 142884$	$S(41) = 741321$	
$S(14) = 11025$	$S(28) = 164836$	$S(42) = 815409$	

**Values of  $Z_2(n)$** 

$Z_2(1) = 1$	$Z_2(14) = 7$	$Z_2(27) = 8$	$Z_2(40) = 15$
$Z_2(2) = 3$	$Z_2(15) = 5$	$Z_2(28) = 7$	$Z_2(41) = 40$
$Z_2(3) = 2$	$Z_2(16) = 7$	$Z_2(29) = 28$	$Z_2(42) = 20$
$Z_2(4) = 3$	$Z_2(17) = 16$	$Z_2(30) = 15$	$Z_2(43) = 42$
$Z_2(5) = 4$	$Z_2(18) = 3$	$Z_2(31) = 30$	$Z_2(44) = 111$
$Z_2(6) = 3$	$Z_2(19) = 18$	$Z_2(32) = 15$	$Z_2(45) = 5$
$Z_2(7) = 6$	$Z_2(20) = 4$	$Z_2(33) = 11$	$Z_2(46) = 23$
$Z_2(8) = 7$	$Z_2(21) = 6$	$Z_2(34) = 16$	$Z_2(47) = 46$
$Z_2(9) = 2$	$Z_2(22) = 11$	$Z_2(35) = 14$	$Z_2(48) = 8$
$Z_2(10) = 4$	$Z_2(23) = 22$	$Z_2(36) = 3$	$Z_2(49) = 6$
$Z_2(11) = 10$	$Z_2(24) = 15$	$Z_2(37) = 36$	$Z_2(50) = 4$
$Z_2(12) = 3$	$Z_2(25) = 4$	$Z_2(38) = 19$	
$Z_2(13) = 12$	$Z_2(26) = 12$	$Z_2(39) = 12$	

### §3. Some Results on Pseudo-Smarandache Function of Second Kind

Following properties are result of direct verification from the above tables.

- (1)  $Z_2(n) = n$  only for  $n = 1$ .
- (2)  $Z_2(p) = p - 1$ ,  $p \neq 2$ .  $Z_2(p) = p + 1$  for  $p = 2$ .
- (3)  $Z_2(n) \geq \max\{Z_2(N) : N | n\}$ .

Following are some of the important results.

**Lemma 3.1** *If  $S(n) = k$  then  $Z_2(k) = n$ .*

*Proof* The proof follows from the definition of  $Z_2(n)$ . □

### §4. Open Problem

**Problem** *What is the relation between  $Z_1(n)$  and  $Z_2(n)$ ?*
