# Multiplicative Interpretation of Neutrosophic Cubic Set on B-Algebra 

Mohsin Khalid, Neha Andaleeb Khalid*, Hasan Khalid*, Said Broumi*<br>Dept. of Mathematics and Statistics, The University of Lahore, Lahore, Pakistan<br>Dept. of Mathematics, Lahore Collage For Women University, Lahore, Pakistan<br>Dep.t of Mathematics,National College of Business Administration Economics, Lahore, 54000, Pakistan<br>Laboratory of Information Processing, Faculty of Science Ben M'Sik, University Hassan II, Casablanca, Morocco<br>mk4605107@gmail.com<br>nehakhalid97@gmail.com<br>hasaikhan31@gmail.com<br>s.broumi@flbenmsik.ma

#### Abstract

Purpose of this paper is to interpret the multiplication of neutrosophic cubic set. Here we define the notation of $\gamma$ multiplication of neutrosophic cubic set and study it with the help of neutrosophic cubic M-subalgebra, neutrosophic cubic normal ideal and neutrosophic cubic closed normal ideal. We also study $r$-multiplication under homomorphism and cartesian product through significant characteristics.

Keywords: B-algebra, Neutrosophic cubic set, $\gamma$-Multiplication, Cartesian product, Homomorphism.

## 1.Introduction

Theory of existing and non-existing value was first introduced by Zadeh [1,2]. Cubic set was defined by Jun et al. [3] in 2012, which was the modern form of interval-valued fuzzy set. Cubic set with the help of subalgebras, ideals and closed ideals of $B$-algebra was studied by Senapati et al. [4]. After the defing of $B C K$-algebra and $B C I$-algebra by Imai et al. [5] and Iseki [6], cubic set through subalgebras and q-ideals in $\mathrm{BCK} / \mathrm{BCI}$-algebra was investigated by Jun et al. [7, 8]. Notion of M-subalgebra on G-algebra is introduced and analyzed by Khalid et al. [9]. Intervalvalued fuzzy set on $B$-algebra was studied by Senapati et al. [10,11]. Intuitionistic fuzzy translation and multiplication of G-algebra were deeply studied by by Khalid et al. [19]. Neutrosophic cubic set is the extended form of interval valued intuitionistic fuzzy theory with indeterminacy was introduced by Smarandache [12]. Neutrosophic logics and neutrosophic probability gave the new idea of research were interpret by Smarandache [13]. Neutrosophic cubic was introduced by Jun et al. [14]. Neutrosophic cubic point, ( $\alpha, \beta$ )-fuzzy ideals and neutrosophic cubic $(\alpha, \beta)$-ideals were analyzed by Gulistan et al. [15]. A new idea of normal ideal and closed normal ideal under neutrosophic cubic set was given and investigated by Khalid et al. [16]. Neutrosophic cubic set was investigated by Jun et al. [17]. PS fuzzy ideals were studied by Priya et al. [18]. Rosenfeld's fuzzy subgroup was studied by Biswas [20]. B-homomorphism was deeply studied by Neggers et al. [21]. Neutrosophic soft cubic subalgebra was extensively studied by Khalid et al. [22]. A B-algebra is an important logical class of algebra was defined by Neggers et al. [23]. T-Neutrosophic Cubic Set was defined and deeply investigated by Khalid et al. [24].

In this paper, we define $\gamma$-multiplication of neutrosophic cubic set and investigate the neutrosophic cubic Msubalgebra, neutrosophic cubic normal ideal (NCNID) and neutrosophic cubic closed normal ideal (NCCNID) under $\gamma$-multiplication with the help of P-intersection, P-union etc. We also study the cartesian product and
homomorphism of $\gamma$-multiplication of neutrosophic cubic normal ideal ( $\gamma$ MNCNID) and $\gamma$-multiplication of neutrosophic cubic closed normal ideal ( $\gamma$ MNCCNID) with important results.

## 2. Preliminaries

Definition 2.1 [19] A nonempty set X with a constant 0 and $*$ is said to be B -algebra if it fulfills these conditions:
$1: t ̦ * t ̧=0$,
$2: t ̦ * 0=0$, for all $t ̦ \in X$.
3: $(\mathrm{t} * \mathrm{t}) * \mathrm{t}=\mathrm{t} *(\mathrm{t} *(0 * \mathrm{t}) \forall \mathrm{t}, \mathrm{t}, \mathrm{t} \in \mathrm{X}$.
Definition 2.2 [21] A nonempty subset $K$ of B-algebra $X$ is called a subalgebra of $Y$ if $t \rightarrow * \in K \forall t, t \in K$, a mapping $\mathrm{f}: \mathrm{X} \rightarrow \mathrm{Y}$ of B-algebra is called B-homomorphism if $\mathrm{f}\left(\mathrm{t} * \mathrm{t}_{\mathrm{t}}\right)=\mathrm{f}(\mathrm{t}) * \mathrm{f}(\mathrm{t}) \forall \mathrm{t}, \mathrm{t} \in \mathrm{X}$.

Definition 2.3 [1] Let $X$ be a collection of elements like $t ̧$. Then a FS $J$ in $X$ is defined as $\left.J=\left\{<t, v_{J}(t)\right\rangle \mid t \in X\right\}$, where $\mu_{\mathrm{J}}(\mathrm{t})$ is called the existenceship value of $t$, in J and $v_{\mathrm{J}}(\mathrm{t}) \in[0,1]$.

For a family $\mathrm{J}_{\mathrm{i}}=\left\{\left\langle\mathrm{t}, \mathrm{v}_{\mathrm{J}_{\mathrm{i}}}(\mathrm{t})>\right| \mathrm{t} \in \mathrm{X}\right\}$ of FSs in X , where $\mathrm{i} \in \mathrm{k}$ and k is index set, Then join $(\mathrm{V})$ and meet $(\Lambda)$ are as follows:

$$
\underset{\mathrm{i} \in \mathrm{k}}{\mathrm{~V}_{\mathrm{i}}}=\left(\mathrm{V}_{\mathrm{i} \in \mathrm{k}} v_{\mathrm{J}_{\mathrm{i}}}\right)(\mathrm{t})=\sup \left\{\mathrm{v}_{\mathrm{J}_{\mathrm{i}}} \mid \mathrm{i} \in \mathrm{k}\right\}
$$

and

$$
\hat{i}_{\mathrm{i} k} \mathrm{~J}_{\mathrm{i}}=\left(\hat{i} \in \mathrm{k}_{\wedge}^{v_{\mathrm{ij}}}\right)(\mathrm{t})=\inf \left\{v_{\mathrm{J}_{\mathrm{i}}} \mid \mathrm{i} \in \mathrm{k}\right\},
$$

respectively, $\forall t \in \mathbb{X}$.

Definition 2.4 [2] An IVFS B is of the form $B=\left\{<t, \tilde{v}_{B}(t)>\mid t \in X\right\}$, where $\tilde{v}_{B} \mid X \rightarrow D[0,1]$, here $D[0,1]$ is the collection of all subintervals of $[0,1]$. The intervals $\tilde{v}_{B}(t)=\left[v_{B}^{-}(t), v_{B}^{+}(t)\right] \forall t, \in X$ denote the degree of existence of $t ̧$ to the set $B$, also $\widetilde{v}_{B}^{c}=\left[1-v_{B}^{-}(t), 1-v_{B}^{+}(t)\right]$ shows the complement of $\tilde{v}_{B}$.

For a family $B_{i}=\left\{<t, \tilde{v}_{B}(t)>\mid t \in X\right\}$ of IVFSs in $X$ where $k$ is an index set and $i \in k$, the union $G=$ $\bigcup_{\mathrm{i} \in \mathrm{k}} \tilde{\mathrm{k}}_{\mathrm{B}_{\mathrm{i}}}(\mathrm{t})$ and the intersection $\mathrm{F}=\bigcap_{\mathrm{i} \in \mathrm{k}} \tilde{\mathrm{k}}_{\mathrm{B}_{\mathrm{i}}}(\mathrm{t})$ are defined below:

$$
\mathrm{G}(\mathrm{t})=\operatorname{rsup}\left\{\tilde{v}_{\mathrm{B}_{\mathrm{i}}}(\mathrm{t}) \mathrm{i} \in \mathrm{k}\right\}
$$

and

$$
\mathrm{F}(\mathrm{t})=\operatorname{rinf}\left\{\tilde{v}_{\mathrm{B}_{\mathrm{i}}}(\mathrm{t}) \mid \mathrm{i} \in \mathrm{k}\right\}
$$

respectively, $\forall t \in X$.
Definition 2.5 [20] Consider two elements $D_{1}, D_{2} \in D[0,1]$. If $D_{1}=\left[t_{1}^{-}, t_{1}^{+}\right]$and $D_{2}=\left[t_{2}^{-}, \zeta_{2}^{+}\right]$, then $r m a x\left(D_{1}, D_{2}\right)=$ $\left[\max \left(\mathrm{t}_{1}^{-}, \mathrm{t}_{2}^{-}\right), \max \left(\mathrm{t}_{1}^{+}, \mathrm{t}_{2}^{+}\right)\right]$which is denoted by $\mathrm{D}_{1} \mathrm{~V}^{\mathrm{r}} \mathrm{D}_{2}$ and $\operatorname{rmin}\left(\mathrm{D}_{1}, \mathrm{D}_{2}\right)=\left[\min \left(\mathrm{t}_{1}^{-}, \mathrm{t}_{2}^{-}\right), \min \left(\mathrm{t}_{1}^{+}, \mathrm{t}_{2}^{+}\right)\right]$which is denoted by $D_{1} \wedge^{r} D_{2}$. Thus, if $D_{i}=\left[t_{1}^{-}, t_{2}^{+}\right] \in D[0,1]$ for $i=1,2,3, \ldots$, then we define $\operatorname{rsup}_{i}\left(D_{i}\right)=$ $\left[\sup _{i}\left(t_{i}^{-}\right), \sup _{i}\left(t_{i}^{+}\right)\right]$, i.e., $V_{i}^{r} D_{i}=\left[V_{i} t_{i}^{-}, V_{i} t_{i}^{+}\right]$. Similarly we define $\operatorname{rinf}_{i}\left(D_{i}\right)=\left[\inf _{i}\left(t_{i}^{-}\right), \inf _{i}\left(t_{i}^{+}\right)\right]$, i.e., $\Lambda_{i}^{r} D_{i}=$ $\left[\Lambda_{i} t_{i}^{-}, \Lambda_{i} t_{i}^{+}\right]$. Now we call $D_{1} \geq D_{2} \Leftarrow t_{1}^{-} \geq t_{2}^{-}$and $t_{1}^{+} \geq t_{2}^{+}$. Similarly the relations $D_{1} \leq D_{2}$ and $D_{1}=D_{2}$ are defined.

Definition 2.6 [19] A fuzzy set $B=\left\{<t, v_{B}(t)>\mid t \in X\right\}$ is called a fuzzy subalgebra of $X$ if $v_{B}(t, t) \geq$ $\min \left\{v_{\mathrm{B}}(\mathrm{t}), \mathrm{v}_{\mathrm{B}}(\mathrm{t})\right\} \forall \mathrm{t}, \mathrm{t} \in \mathrm{X}$.

Definition 2.7 [14] Let $X$ be a nonempty set. A NCS is $P_{k}=(B, \Lambda)$, where $B=\left\{\left\langle t ; B_{T}(t), B_{I}(t), B_{F}(t)\right\rangle \mid t \in X\right\}$ is an interval neutrosophic set in $X$ and $\Lambda=\left\{\left\langle t ; \lambda_{T}(t), \lambda_{\mathrm{I}}(\mathrm{t}), \lambda_{\mathrm{F}}(\mathrm{t})\right\rangle \mid \mathrm{t} \in \mathrm{X}\right\}$ is a neutrosophic set in X .

Definition 2.8 [3] Let $U$ be a universe and cubic set in $U$, we mean a structure $\left\{t, \bar{v}_{A}(t), \lambda_{A}(t) \mid t \in U\right\}$ in which $\bar{v}_{A}$ is an IVF set in $U$ and $\lambda_{A}$ is a fuzzy set in $U$. A cubic set $A=\left\{t, \bar{v}_{A}(t), \lambda_{A}(t) \mid t, \in U\right\}$ is simply denoted by $C(U)$, which is the set of all cubic sets in $U$.

Definition $2.9[3]$ Let $C=\{\langle t, C(t), \lambda(t)\rangle\}$ be a cubic set, where $C(t)$ is an IVFS in $Y, \lambda(t)$ is a fuzzy set in $Y$. Then $A$ is cubic subalgebra under $*$ if it fulfills these axioms:

$$
\begin{aligned}
& \mathrm{C} 1: \mathrm{C}(\mathrm{t} * \mathrm{t}) \geq \operatorname{rmin}\{\mathrm{C}(\mathrm{t}), \mathrm{C}(\mathrm{t})\}, \\
& \mathrm{C} 2: \lambda(\mathrm{t}, \mathrm{t}) \leq \max \{\lambda(\mathrm{t}), \lambda(\mathrm{t})\} \forall \mathrm{t}, \mathrm{t} \in \mathrm{X} .
\end{aligned}
$$

Definition 2.10 [18] A fuzzy set $B=\left\{<t, v_{B}(t)>\mid t \in X\right\}$ is called a fuzzy ideal of $X$ if
(i) $v_{B}(0) \geq v_{B}(t)$,
(ii) $v_{\mathrm{B}}(\mathrm{t}) \geq \min \left\{\mathrm{v}_{\mathrm{B}}\left(\mathrm{t} * \mathrm{t}_{\mathrm{t}}\right), v_{\mathrm{B}}(\mathrm{t})\right\} \forall \mathrm{t}, \mathrm{t} \in \mathrm{X}$.

Definition $2.11[14]$ For any $C_{i}=\left(A_{I}, F_{I}\right)$, where $A_{i}=\left\{\left\langle t_{1} ; A_{i T}(t), A_{i I}(t), A_{i F}(t)\right\rangle \mid t, t \in Y\right\}, F_{i}=\left\{\left\langle t_{1} ; F_{i T}(t), F_{i I}(t)\right.\right.$, $\left.\left.\mathrm{F}_{\mathrm{iF}}(\mathrm{t})\right\rangle \mid t \in \mathrm{Y}\right\}$ for $\mathrm{i} \in \mathrm{k}$, then

P-intersection: $\bigcap_{\mathrm{i} \in \mathrm{k}} \mathrm{C}_{\mathrm{i}}=\left(\bigcap_{\mathrm{i} \in \mathrm{k}} \mathrm{A}_{\mathrm{i}}, \bigwedge_{\mathrm{i} \in \mathrm{k}} \mathrm{F}_{\mathrm{i}}\right)$,
R-union: $\underset{i \in k}{\bigcup_{\mathrm{R}}} \mathrm{C}_{\mathrm{i}}=\left(\mathrm{U}_{\mathrm{i} \in \mathrm{k}} \mathrm{A}_{\mathrm{I}}, \bigwedge_{\mathrm{i} \in \mathrm{k}} \mathrm{F}_{\mathrm{i}}\right)$,
R-intersection: $\bigcap_{\mathrm{i} \in \mathrm{k}} \mathrm{C}_{\mathrm{i}}=\left(\bigcap_{\mathrm{i} \in \mathrm{k}} A_{\mathrm{i}}, \mathrm{V}_{\mathrm{i} \in \mathrm{k}} \mathrm{F}_{\mathrm{i}}\right)$.
Definition 2.12 [16] A NCS $\mathrm{R}=\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)$ of X is called a NCNID of X if it fulfills following axioms:
N3. $\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0) \geq \mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)$ and $\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0) \leq \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)$,
N4. $\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \geq \operatorname{rmin}\left\{\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)), \mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}$,
N5. $\left.\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \leq \max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) *(\mathrm{t} * \beta)\right), \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}, \forall \mathrm{t}, \mathrm{t} \mathrm{X}$ and $\alpha, \beta \in[0,1]$.
Let $\mathrm{R}=\left\{\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right\}$ be a NCS X then it is called NCCNID of X if it fulfills N 4 , N5 and N6: $\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *$ $(\mathrm{t} * \alpha)) \geq \mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)$ and $\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} * \alpha)) \leq \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \forall \mathrm{t} \in \mathrm{X}$ and $\alpha \in[0,1]$.

Definition 2.13 [16] Let $\mathrm{R}=\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)$ and $\mathcal{B}=\left(\mathrm{B}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \mathrm{U}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)$ are two NCSs of X and Y respectively. The Cartesian product $\mathrm{R} \times \mathcal{B}=\left(\mathrm{X} \times \mathrm{Y}, \mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{B}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{U}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)$ is defined by $\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{B}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(\mathrm{t}, * \alpha, \mathrm{t} * \beta)=$ $\operatorname{rmin}\left\{\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \mathrm{B}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}$ and $\left.\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{v}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(\mathrm{t} * \alpha, \mathrm{t} * \beta)=\max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \mathrm{u}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right)\right\}$, where $\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times$ $\mathrm{B}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \mid \mathrm{X} \times \mathrm{Y} \rightarrow \mathrm{D}[0,1]$ and $\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{v}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \mid \mathrm{X} \times \mathrm{Y} \rightarrow[0,1] \forall(\mathrm{t}, \mathrm{t}) \in \mathrm{X} \times \mathrm{Y}$ and $\alpha, \beta \in[0,1]$.

Definition 2.14 [16] A neutrosophic cubic subset $\mathrm{R} \times \mathrm{F}=\left(\mathrm{X} \times \mathrm{Y}, \mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)$ is called a NCNID if satisfies these conditions:

1. $\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(0,0) \geq\left(\mathrm{R}_{\mathrm{T}, \mathrm{l}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)((\mathrm{t} * \alpha),(\mathrm{t} * \beta))$ and $\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(0,0) \leq\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)((\mathrm{t} * \alpha),(\mathrm{t} *$ $\beta$ )) $\forall(t, t) \in X \times Y$ and $\alpha, \beta \in[0,1]$.
2. $\quad\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right) \geq \operatorname{rmin}\left\{\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)\left(\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right)\right),\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)\left(\mathrm{t}_{2} *\right.\right.$ $\left.\left.\alpha, t_{2} * \beta\right)\right\}$.
3. $\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right) \leq \max \left\{\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)\left(\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right)\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right)\right),\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} *\right.\right.$ $\beta)\}$ and $\mathrm{R} \times \mathrm{F}$ is closed normal ideal if it satisfies 2, 3, and 4. $\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)\left((0,0) *\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right)\right) \geq$ $\left(\mathrm{R}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(\mathrm{t} * \alpha, \mathrm{t} * \beta)$ and $\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)((0,0) *(\mathrm{t} * \alpha, \mathrm{t} * \beta)) \leq\left(\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(\mathrm{t} * \alpha, \mathrm{t} * \beta) \quad \forall\left(\mathrm{t}_{1}, \mathrm{t}_{1}\right)$ and $\left(\mathrm{t}_{2}, \mathrm{t}_{2}\right) \in \mathrm{X} \times \mathrm{Y}$ and $\alpha, \beta \in[0,1]$.

Definition 2.15 [9] Let $\tilde{\mathcal{F}}_{\mathrm{k}}=\left(\mathrm{A}_{\mathrm{e}_{\mathrm{i}}}, \Lambda_{\mathrm{e}_{\mathrm{i}}}\right)$ be a neutrosophic soft cubic set, where Y is subalgebra. Then $\tilde{\mathcal{F}}_{\mathrm{k}}$ is NSCMSU under binary operation $*$ where $\mathrm{t}_{1}, \mathrm{t}_{2} \in \mathrm{Y}$ and $\alpha, \beta \in[0,1]$ if it fulfills these conditions:
$A_{\mathrm{e}_{\mathrm{i}}}^{\varrho}\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \beta\right)\right) \geq \operatorname{rmin}\left\{A_{\mathrm{e}_{\mathrm{i}}}^{\varrho}\left(\mathrm{t}_{1} * \alpha\right), \mathrm{A}_{\mathrm{e}_{\mathrm{i}}}^{\varrho}\left(\mathrm{t}_{2} * \beta\right)\right\}$ and $\lambda_{\mathrm{e}_{\mathrm{i}}}^{\varrho}\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \beta\right)\right) \leq \max \left\{\lambda_{\mathrm{e}_{\mathrm{i}}}^{\varrho}\left(\mathrm{t}_{1} * \alpha\right), \lambda_{\mathrm{e}_{\mathrm{i}}}^{\varrho}\left(\mathrm{t}_{2} *\right.\right.$ $\beta)\}$.

## 3. r-Multiplication of Neutrosophic Cubic Normal Ideal and Closed Normal Ideal

Definition 3.1. Let $H=\left(H_{T, I, F}, \lambda_{T, I, F}\right)$ be a NCS of $X$ and $\gamma \in[0,1]$. An object of the form $H_{\gamma}^{M}=\left({ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{H}},{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{H}}\right)$ is called neutrosophic cubic $\gamma$ multiplication of $\mathrm{H} X$ if it fulfills following axioms:

$$
\begin{array}{ll}
{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}}^{\mathrm{H}}(\mathrm{x})=\gamma \cdot H_{T}^{\mathrm{H}}(\mathrm{x}), & { }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}}^{\mathrm{H}}(\mathrm{x})=\gamma \cdot \lambda_{\mathrm{T}}^{\mathrm{H}}(\mathrm{x}), \\
{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{I}}^{\mathrm{H}}(\mathrm{x})=\gamma \cdot H_{\mathrm{I}}^{\mathrm{H}}(\mathrm{x}), & { }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{I}}^{\mathrm{H}}(\mathrm{x})=\gamma \cdot \lambda_{\mathrm{I}}^{\mathrm{H}}(\mathrm{x}), \\
{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{F}}^{\mathrm{H}}(\mathrm{x})=\gamma \cdot H_{\mathrm{F}}^{\mathrm{H}}(\mathrm{x}), & { }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{F}}^{\mathrm{H}}(\mathrm{x})=\gamma \cdot \lambda_{\mathrm{F}}^{\mathrm{H}}(\mathrm{x}) .
\end{array}
$$

For convinience we use ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{H}}=\gamma \cdot \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{H}}(\mathrm{x})$ and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{H}}=\gamma \cdot \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{H}}(\mathrm{x})$.
Theorem 3.1 A $\gamma$-multilplication of NCCNID of B-algebra $X$ is also a $\gamma$-multilplication of NCMSU of X.
Proof. Suppose $H=\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right\}$ be a NCCNID of X, then for any $t \in \mathbb{X}$, we have ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(t, t * \alpha))=$ $\gamma \cdot \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} * \alpha)) \geq \gamma \cdot \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)$ and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} * \alpha))=\gamma \cdot \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} * \alpha)) \leq \gamma \cdot \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)$. Now by N4, N6, and through proposition 3.3 of article M subalgebra, we know that ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * *) *(\mathrm{t} * \beta))=\gamma . \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t}, * \alpha) *$ $(\mathrm{t} * \beta)) \geq \gamma \cdot \operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)) *(0 *(\mathrm{t} * \beta))), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} * \beta))\right\}=\gamma \cdot \operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *\right.$ $(\mathrm{t} * \beta))\} \geq \gamma \cdot \operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}=\operatorname{rmin}\left\{\gamma \cdot \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \gamma \cdot \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}=\operatorname{rmin}\left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} *\right.$ $\left.\alpha),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\} \quad$ and $\quad{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t}, \alpha) *(\mathrm{t} * \beta))=\gamma \cdot \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)) \leq \gamma \cdot \max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)) *\right.$ $\left.(0 *(\mathrm{t} * \beta))), \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} * \beta))\right\}=\gamma \cdot \max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} * \beta))\right\} \quad \leq \gamma \cdot \max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} *\right.$ $\beta)\}=\max \left\{\gamma \cdot \lambda_{T, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \gamma \cdot \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}=\max \left\{{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha),{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}$. Hence, $\gamma \mathrm{MNCCNID}$ is $\gamma \mathrm{MNCMSU}$ of $X$.

Proposition 3.1 Every $\gamma$-multiplication of NCCNID is a $\gamma$-multiplication NCNID but the converse is not true in general.

Theorem 3.2 The R-intersection of any set of $\gamma$ MNCNIDs of $X$ is also a rMNCNID of $X$.
Proof. Let $\mathrm{H}_{\mathrm{i}}=\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{i}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{\mathrm{i}}\right\}$, where $\mathrm{i} \in \mathrm{k}$, be a $\gamma$ MNCNID of X and $\mathrm{t}, \mathrm{t} \in \mathrm{X}$. Then

$$
\begin{aligned}
& \left(\cap{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}\right)(0)=\operatorname{rinf}{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}(0)=\operatorname{rinf} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}(0) \cdot \gamma \\
& \geq \operatorname{rinf}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}(\mathrm{t} * \alpha) \cdot \gamma=\operatorname{rinf}{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}(\mathrm{t} * \alpha) \\
& =\left(\cap{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}\right)(\mathrm{t} * \alpha) \\
& \Rightarrow\left(\cap{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}\right)(0) \geq\left(\cap{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}\right)(\mathrm{t} * \alpha)
\end{aligned}
$$

and
now

$$
\operatorname{rmin}\left\{\left(\cap{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}\right)((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)),\left(\cap{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{l}, \mathrm{~F}}^{\mathrm{i}}\right)(\mathrm{t} * \beta)\right\}
$$

and

$$
\begin{aligned}
& \left.\left(V_{\gamma}^{M} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}\right)(\mathrm{t} * \alpha)=\sup _{\gamma}^{M_{\gamma} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{I}}(\mathrm{t},} * \alpha\right)=\sup \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{~F}}^{\mathrm{i}}((\mathrm{t}, * \alpha) \cdot \gamma \\

\end{aligned}
$$

which show that R -intersection is a $\gamma \mathrm{MNCNID}$ of X .

Theorem 3.3. The R-intersection of any set of $\gamma$ MNCCNIDs of $X$ is also a $\gamma$-multiplication of NCCNID of $X$.
Proof. We can prove this theorem as Theorem 3.2.
Theorem 3.4. Let $\mathrm{H}=\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right\}$ be a NCS of X . Then $\gamma$ MNCNID of H is a NCNID of X iff ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-},{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}$and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}$ are fuzzy ideals of X .

Proof. Suppose that $t, t, t \in X$. Since ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(0)=\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(0) . \gamma \geq \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \alpha) . \gamma={ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(t, \alpha), \quad{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(0)=$ $\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(0) \cdot \gamma \geq \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \alpha) \cdot \gamma={ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * * \alpha)$, therefore, $\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0) \geq \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)$, also ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0)=\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0) \cdot \gamma \leq$ $\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t}, * \alpha) \cdot \gamma={ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)$. Suppose that ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-},{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}$and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}$ are $\gamma$-multiplication of fuzzy ideals of X. Then ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)=\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \cdot \gamma=\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \alpha), \mathrm{H}_{\mathrm{T}, \mathrm{l}, \mathrm{F}}^{+}(\mathrm{t} * \alpha)\right\} . \gamma \geq\left[\min \left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}((\mathrm{t}, \alpha \alpha) *(\mathrm{t} * \beta)), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}((\mathrm{t} *\right.\right.$ $\beta))\}, \min \left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}((\mathrm{t}, * \alpha) *(\mathrm{t} * \beta)), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \beta)\right\} \cdot \gamma \quad=\operatorname{rmin}\left\{\left[\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}((\mathrm{t}, \alpha) *(\mathrm{t} *\right.\right.$ $\left.\beta))],\left[\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}((\mathrm{t} * \beta)), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \beta)\right]\right\} \cdot \gamma=\operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\} \cdot \gamma=\operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((t, \alpha) *\right.$ $\left.(\mathrm{t} * \beta)) \cdot \gamma, \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta) \cdot \gamma\right\}=\operatorname{rmin}\left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}$ and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \leq \max \left\{{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} *\right.$ $\left.\alpha) *(\mathrm{t} * \beta)),{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}$. Therefore $\gamma$ MNCNID of H is a NCNID of X .

Conversely, assume that $\gamma$ MNCNID $H$ is a NCNID of $X$. For any $t, t \in X$, we have $\left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(t, \alpha),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \alpha)\right\}=$ $\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \alpha) \cdot \gamma, \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \alpha) \cdot \gamma\right\}=\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \alpha), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \alpha)\right\} \cdot \gamma=\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \cdot \gamma={ }_{\gamma} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)=\mathrm{rmin}$
$\left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}=\operatorname{rmin}\left\{\left[{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta))\right],\left[{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} *\right.\right.$ $\left.\left.\beta),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \beta)\right]\right\}=\left[\min \left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t}, ~ * \alpha) *(\mathrm{t} * \beta)\right) \cdot \gamma, \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \beta) \cdot \gamma\right\}, \min \left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}((\mathrm{t}, \alpha) *(\mathrm{t} * \beta)) . \gamma, \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} *\right.$ $\left.\beta) . \gamma\}=\left[\min \left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \beta)\right\}, \min \left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \alpha) *(\mathrm{t} * \beta)\right),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \beta)\right\}\right]$. Thus, ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \alpha) \geq \quad \min \left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-}(\mathrm{t} * \beta)\right\},{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \alpha) \geq \quad \min \left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}((\mathrm{t}, * \alpha) *(\mathrm{t} *\right.$ $\beta)$ ), $\left.{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{+}(\mathrm{t} * \beta)\right\}$ and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \leq \max \left\{{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)),{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}$. Hence, ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}^{-},{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{l}, \mathrm{F}}^{+}$and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}$ are fuzzy ideals of X .

Theorem 3.5. For a NCNID $\mathrm{H}=\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right\}$ of X , the following statements are valid:

1. If $(t, \alpha) *(t * \beta) \leq z * \gamma$, then $\left.{ }_{\gamma}^{M} H_{T, I, F}(t) * \alpha\right) \geq \operatorname{rmin}\left\{{ }_{\gamma}^{M} H_{T, I, F}(t * \beta),{ }_{\gamma}^{M} H_{T, I, F}(z * \gamma)\right\} \quad$ and $\left.\quad{ }_{\gamma}^{M} \lambda_{T, I, F}(t) * \alpha\right) \leq$ $\max \left\{{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta),{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma)\right\}$,
2. If $(\mathrm{t} * \alpha) \leq(\mathrm{t} * \beta)$, then ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \geq{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)$ and $\quad{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \leq{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta) \quad \forall \quad \mathrm{t}, \mathrm{t}, \mathrm{z} \in$ X and $\alpha, \beta, \gamma \in[0,1]$.

Proof. 1. Assume that $\mathrm{t}, \mathrm{t}, \mathrm{z} \in \mathrm{X}$ such that $(\mathrm{t} * \alpha) *(\mathrm{t} * \beta) \leq(\mathrm{z} * \gamma)$. Then $((\mathrm{t}, * \alpha) *(\mathrm{t} * \beta)) *(\mathrm{z} * \gamma)=0$ and thus ${ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)=\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \cdot \gamma \geq \operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\} \cdot \gamma \geq \operatorname{rmin}\left\{\operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(((\mathrm{t}, * \alpha) *\right.\right.$ $\left.\left.(\mathrm{t} * \beta)) *(\mathrm{z} * \gamma)), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma)\right\}, \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\} \cdot \gamma=\operatorname{rmin} \quad\left\{\operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0), \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma)\right\}, \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\} \cdot \gamma=$ $\operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta) \cdot \gamma, \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma) \cdot \gamma\right\}=\operatorname{rmin}\left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta),{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma)\right\} \quad$ and ${ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha)=\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) \cdot \gamma \leq$ $\max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}((\mathrm{t}, \alpha) *(\mathrm{t} * \beta)), \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\} . \gamma \leq \max \left\{\max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)) *(\mathrm{z} * \gamma)), \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma)\right\}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} *\right.$ $\beta)\} \cdot \gamma=\max \left\{\max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0), \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma)\right\}, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\} \cdot \gamma=\max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta) \cdot \gamma, \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{z} * \gamma) \cdot \gamma\right\}=\max \left\{{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} *\right.$乃), $\left.{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{Z} * \gamma)\right\}$.
2. Again, take $\mathrm{t}, \mathrm{t} \in X$ and $\alpha, \beta \in[0,1]$, such that $(\mathrm{t} * \alpha) \leq(\mathrm{t} * \beta)$. Then $(\mathrm{t} * \alpha) *(\mathrm{t} * \beta)=0$ and thus ${ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * *$ $\alpha)=H_{T, I, F}(\mathrm{t} * \alpha) \cdot \gamma \geq \operatorname{rmin}\left\{H_{T, I, F}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)), H_{T, I, F}(\mathrm{t} * \beta)\right\} \cdot \gamma=\operatorname{rmin}\left\{H_{T, I, F}(0), H_{T, I, F}(\mathrm{t} * \beta)\right\} . \gamma=$ $H_{T, I, F}(\mathrm{t} * \beta) \cdot \gamma=\quad{ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * \beta)$, so ${ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t}, \alpha) \geq{ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * \beta) \quad$ and $\quad{ }_{\gamma}^{M} \lambda_{T, I, F}(\mathrm{t} * \alpha)=\lambda_{T, I, F}(\mathrm{t} * \alpha) . \gamma \leq$
$\max \left\{\lambda_{T, l, F}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)), \lambda_{T, l, F}(\mathrm{t} * \beta)\right\} \cdot \gamma=\max \left\{\lambda_{T, l, F}(0), \lambda_{T, l, F}(\mathrm{t} * \beta)\right\} \cdot \gamma=\lambda_{T, l, F}(\mathrm{t} * \beta) \cdot \gamma={ }_{\gamma}^{M} \lambda_{T, l, F}(\mathrm{t} *$ $\beta)$, so ${ }_{\gamma}^{M} \lambda_{T, I, F}(\mathrm{t} * \alpha) \leq{ }_{\gamma}^{M} \lambda_{T, l, F}(\mathrm{t} * \beta)$.

Theorem 3.6. Let ${ }_{\gamma}^{M} \mathrm{H}$ of $\mathrm{H}=\left\{H_{T, I, F}, \lambda_{T, I, F}\right\}$ is a NCNID of $X . \forall t, t \in X$ and $\alpha, \beta \in[0,1]$, then H is a NCMSU of $X$.

Proof. Assume that ${ }_{\gamma}^{M} \mathrm{H}$ is a NCNID of $X, \forall \mathrm{t}, \mathrm{t} \in X$ and $\alpha, \beta \in[0,1]$. Then $\gamma \cdot H_{T, I, F}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta))=$ $\left.{ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * \alpha) *(\mathrm{t} * \beta)\right) \geq \operatorname{rmin}\left\{{ }_{\gamma}^{M} H_{T, I, F}((\mathrm{t} * \beta) *((\mathrm{t} * \alpha) *(\mathrm{t} * \beta))),{ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * \beta)\right\}=$ $\operatorname{rmin}\left\{{ }_{\gamma}^{M} H_{T, l, F}(0),{ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * \beta)\right\} \geq \operatorname{rmin}\left\{{ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * \alpha),{ }_{\gamma}^{M} H_{T, I, F}(\mathrm{t} * \beta)\right\}=r \min \left\{H_{T, l, F}(\mathrm{t} * \alpha) \cdot \gamma, H_{T, l, F}(\mathrm{t} *\right.$ $\left.\beta) \cdot \gamma\}=r \min \left\{H_{T, l, F}(\mathrm{t} * \alpha), H_{T, l, F}(\mathrm{t} * \beta)\right\} \cdot \gamma \Rightarrow H_{T, L, F}(\mathrm{t} * \alpha) *(\mathrm{t} * \beta)\right) \geq r \min \left\{H_{T, l, F}(\mathrm{t} * \alpha), H_{T, L, F}(\mathrm{t} *\right.$
$\beta)\}$ and $\gamma \cdot \lambda_{T, L, F}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta))={ }_{\gamma}^{M} \lambda_{T, L, F}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)) \leq \max \left\{{ }_{\gamma}^{M} \lambda_{\mathrm{T},, \mathrm{F}}((\mathrm{t} * \beta) *((\mathrm{t} * \alpha) *(\mathrm{t} *\right.$ $\left.\beta)),{ }_{\gamma}^{M} \lambda_{T, l, F}(\mathrm{t} * \beta)\right\}=\max \left\{{ }_{\gamma}^{M} \lambda_{T, L, F}(0),{ }_{\gamma}^{M} \lambda_{T, L, F}(\mathrm{t} * \beta)\right\} \leq \max \left\{{ }_{\gamma}^{M} \lambda_{T, l, F}(\mathrm{t} * \alpha),{ }_{\gamma}^{M} \lambda_{T, I, F}(\mathrm{t} * \beta)\right\}=\max \left\{\lambda_{T, L, F}(\mathrm{t} *\right.$ $\left.\alpha) \cdot \gamma, \lambda_{T, I, F}(\hbar * \beta) \cdot \gamma\right\}=\max \left\{\lambda_{T, I, F}(\mathrm{t} * \alpha), \lambda_{T, I, F}(\mathrm{t} * \beta)\right\} \cdot \gamma \Rightarrow \lambda_{T, l, F}((\mathrm{t} * \alpha) *(\hbar * \beta)) \leq \max \left\{\lambda_{T, I, F}(\mathrm{t} *\right.$ $\left.\alpha), \lambda_{T, I, F}((\mathrm{t} * \beta))\right\}$. Hence, $\mathrm{H}\left\{H_{T, L, F}, \lambda_{T, l, F}\right\}$ is a NCMSU of $X$.

## 4. r-Multiplication under Homomorphism

Theorem 4.1. Suppose that $\Gamma \mid X \rightarrow Y$ is a homomorphic mapping of $P S$-algebra. If ${ }_{\gamma}^{M} \mathrm{H}$ of $\mathrm{H}=\left(H_{T, l, F}, \lambda_{T, I, F}\right)$ is a NCNID of $Y$, then pre-image $\Gamma^{-1}\left({ }_{\gamma}^{M} \mathrm{H}\right)=\left(\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}\right), \Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, L, F}\right)\right)$ of ${ }_{\gamma}^{M} \mathrm{H}$ under $\Gamma$ of $X$ is a NCNID of $X$.

Proof. For all $\mathrm{t} \in X$ and $\alpha \in[0,1], \Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}\right)(\mathrm{t} * \alpha)={ }_{\gamma}^{M} H_{T, l, F}(\Gamma(\mathrm{t} * \alpha))=H_{T, L, F}(\Gamma(\mathrm{t} * \alpha)) \cdot \gamma \leq H_{T, l, F}(\Gamma(0)) \cdot \gamma$ $={ }_{\gamma}^{M} H_{T, l, F}(\Gamma(0)) \quad=\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}\right)(0) \quad$ and $\left.\quad \Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, l, F}\right)(\mathrm{t} * \alpha)={ }_{\gamma}^{M} \lambda_{T, L, F} \Gamma(\mathrm{t} * \alpha)\right)=\lambda_{T, L, F}(\Gamma(\mathrm{t} * \alpha)) \cdot \gamma \geq$ $\lambda_{T, l, F}(\Gamma(0)) \cdot \gamma={ }_{\gamma}^{M} \lambda_{T, L, F}(\Gamma(0))=\Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, L, F}\right)(0)$.

Let $\quad \mathrm{t}, \mathrm{t} \in X, \quad \Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}\right)(\mathrm{t} * \alpha)={ }_{\gamma}^{M} H_{T, l, F}(\Gamma(\mathrm{t} * \alpha))=H_{T, I, F}(\Gamma(\mathrm{t} * \alpha)) . \gamma \quad \geq r \min \left\{H_{T, l, F}(\Gamma(\mathrm{t} * \alpha) * \Gamma(\mathrm{t} *\right.$ $\left.\beta)), H_{T, L, F}(\Gamma(\mathrm{t} * \beta))\right\} \cdot \gamma=\operatorname{rmin}\left\{H_{T, I, F}(\Gamma((\mathrm{t} * \alpha) *(\mathrm{t} * \beta))), H_{T, I, F}(\Gamma(\mathrm{t} * \beta))\right\} \cdot \gamma \quad=r \min \left\{\Gamma^{-1}\left(H_{T, l, F}((t, \alpha) *\right.\right.$ $\left.\left.(\mathrm{t} * \beta)) \cdot \gamma), \Gamma^{-1}\left(H_{T, L, F}(\mathrm{t} * \beta) \cdot \gamma\right)\right\}=\operatorname{rmin}\left\{\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, l, F}((\mathrm{t}) * \alpha) *(\mathrm{t} * \beta)\right)\right), \Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}(\mathrm{t} * \beta)\right)\right\} \quad$ and $\Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, l, F}\right)(\mathrm{t} * \alpha)={ }_{\gamma}^{M} \lambda_{T, l, F}(\Gamma(\mathrm{t} * \alpha))=\lambda_{T, l, F}(\Gamma(\mathrm{t} * \alpha)) . \gamma \leq \max \left\{\lambda_{T, I, F}(\Gamma(\mathrm{t} * \alpha) * \Gamma(\mathrm{t} * \beta)), \lambda_{T, I, F}(\Gamma(\mathrm{t} *\right.$ $\beta))\} \cdot \gamma=\max \left\{\lambda_{T, l, F}(\Gamma((\mathrm{t} * \alpha) *(\mathrm{t} * \beta))), \lambda_{T, I, F}(\Gamma(\mathrm{t} * \beta))\right\} \cdot \gamma=\max \left\{\Gamma^{-1}\left(\lambda_{T, I, F}(\mathrm{t} * \alpha) *(\mathrm{t} *\right.\right.$ $\beta)$ ) $\left.\gamma), \Gamma^{-1}\left(\lambda_{T, L, F}(\mathrm{t} * \beta) \cdot \gamma\right)\right\}=\max \left\{\Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, I, F}((\mathrm{t} * \alpha) *(\mathrm{t} * \beta)), \Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, l, F}(\mathrm{t} * \beta)\right)\right\}\right.$. Hence, $\Gamma^{-1}\left({ }_{\gamma}^{M} \mathrm{H}\right)=$ ( $\left.\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}\right), \Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, I, F}\right)\right)$ is a NCNID of $X$.

Theorem 4.2. Let $\Gamma \mid X \rightarrow Y$ be a homomorphic mapping of $B$-algebra. If ${ }_{\gamma}^{M} \mathrm{H}_{i}$ of $\mathrm{H}_{i}=\left(H_{T, I, F}^{i}, \lambda_{T, I, F}^{i}\right)$ is a NCNID of $Y$ where $i \in k$, then the pre-image $\Gamma^{-1}\left(\bigcap_{i \in k}{ }_{\gamma}^{M} H_{T, I, F}^{i}\right)=\left(\Gamma^{-1}\left(\bigcap_{i \in k}{ }_{\gamma}^{M} H_{T, L, F}^{i}\right), \Gamma^{-1}\left(\bigcap_{i \in k}{ }_{\gamma}^{M} \lambda_{T, L, F}^{i}\right)\right)$ is a NCNID of $X$.

Proof. We can prove this theorem through Theorem 3.2 and Theorem 4.1.
Theorem 4.3. Let $\Gamma \mid X \rightarrow Y$ is an epimorphic mapping of $B$-algebra.Then ${ }_{\gamma}^{M} \mathrm{H}=\left({ }_{\gamma}^{M} H_{T, I, F},{ }_{\gamma}^{M} \lambda_{T, I, F}\right)$ is a NCNID of $Y$, if pre-image $\Gamma^{-1}\left({ }_{\gamma}^{M} \mathrm{H}\right)=\left(\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, I, F}\right), \Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, L, F}\right)\right)$ of ${ }_{\gamma}^{M} \mathrm{H}$ under $\Gamma$ of $X$ is a NCNID of $X$

Proof. For any $\mathrm{t} \in Y, \mathrm{t} \in X$ and $\alpha, \beta \in[0,1]$ such that $(\mathrm{t} * \beta)=\Gamma(\mathrm{t} * \alpha)$. Then ${ }_{\gamma}^{M} H_{T, L, F}(\mathrm{t} * \beta)={ }_{\gamma}^{M} H_{T, I, F}(\Gamma(\mathrm{t} * \alpha))$ $=\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}\right)(\mathrm{t} * \alpha)=\Gamma^{-1}\left(H_{T, l, F}\right)(\mathfrak{t} * \alpha) \cdot \gamma \geq \Gamma^{-1}\left(H_{T, I, F}\right)(0) \cdot \gamma=H_{T, I, F}(\Gamma(0)) \cdot \gamma=H_{T, l, F}(0) \cdot \gamma={ }_{\gamma}^{M} H_{T, I, F}(0)$ and ${ }_{\gamma}^{M} \lambda_{T, l, F}(\mathrm{t} * \beta)={ }_{\gamma}^{M} \lambda_{T, I, F}(\Gamma(\mathrm{t} * \alpha)) \quad=\Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, l, F}\right)(\mathrm{t} * \alpha)=\Gamma^{-1}\left(\lambda_{T, l, F}\right)(\mathrm{t} * \alpha) \cdot \gamma \leq \Gamma^{-1}\left(\lambda_{T, l, F}\right)(0) \cdot \gamma=$ $\lambda_{T, l, F}(\Gamma(0)) \cdot \gamma=\lambda_{T, I, F}(0) \cdot \gamma={ }_{\gamma}^{M} \lambda_{T, l, F}(0)$.

Assume $\mathrm{t}_{1}, \mathrm{t}_{2} \in Y$. Then $\Gamma\left(\mathrm{t}_{1} * \alpha\right)=\mathrm{t}_{1} * \beta$ and $\Gamma\left(\mathrm{t}_{2} * \alpha\right)=\mathrm{t}_{2} * \beta$ for some $\mathrm{t}_{1}, \mathrm{t}_{2} \in X$ and $\alpha, \beta \in[0,1]$. Thus ${ }_{\gamma}^{M} H_{T, L, F}\left(\mathrm{t}_{1} * \beta\right)={ }_{\gamma}^{M} H_{T, l, F}\left(\Gamma\left(\mathrm{t}_{1} * \alpha\right)\right)=\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, l, F}\right)\left(\mathrm{t}_{1} * \alpha\right)=\Gamma^{-1}\left(H_{T, L, F}\right)\left(\mathrm{t}_{1} * \alpha\right) . \gamma \geq r \min \left\{\Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, L, F}\right)\left(\left(\mathrm{t}_{1} *\right.\right.\right.$
$\left.\left.\alpha) *\left(\mathrm{t}_{2} * \alpha\right)\right), \Gamma^{-1}\left({ }_{\gamma}^{M} H_{T, I, F}\right)\left(\mathrm{t}_{2} * \alpha\right)\right\} . \gamma=\operatorname{rmin}\left\{{ }_{\gamma}^{M} H_{T, l, F}\left(\Gamma\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \alpha\right)\right)\right), H_{T, I, F}\left(\Gamma\left(\mathrm{t}_{2} * \alpha\right)\right)\right\} . \gamma=$ $r \min \left\{H_{T, l, F}\left(\Gamma\left(\mathrm{t}_{1} * \alpha\right) * \Gamma\left(\mathrm{t}_{2} * \alpha\right)\right), H_{T, l, F}\left(\Gamma\left(\mathrm{t}_{2} * \alpha\right)\right)\right\}=\operatorname{rmin}\left\{H_{T, l, F}\left(\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right), H_{T, l, F}\left(\mathrm{t}_{2} * \beta\right)\right\} . \gamma=$ $\left.\operatorname{rmin}\left\{H_{T, I, F}\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right) \cdot \gamma, H_{T, l, F}\left(\mathrm{t}_{2} * \beta\right) . \gamma\right\}=\operatorname{rmin}\left\{{ }_{\gamma}^{M} H_{T, l, F}\left(\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right),{ }_{\gamma}^{M} H_{T, I, F}\left(\mathrm{t}_{2} * \beta\right)\right\} \quad$ and ${ }_{\gamma}^{M} \lambda_{T, L, F}\left(\mathrm{t}_{1} * \beta\right)={ }_{\gamma}^{M} \lambda_{T, I, F}\left(\Gamma\left(\mathrm{t}_{1} * \alpha\right)\right)=\Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, l, F}\right)\left(\mathrm{t}_{1} * \alpha\right)=\Gamma^{-1}\left(\lambda_{T, l, F}\right)\left(\mathrm{t}_{1} * \alpha\right) \cdot \gamma \leq \max \left\{\Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, l, F}\right)\left(\left(\mathrm{t}_{1} *\right.\right.\right.$ $\left.\left.\alpha) *\left(\mathrm{t}_{2} * \alpha\right)\right), \Gamma^{-1}\left({ }_{\gamma}^{M} \lambda_{T, I, F}\right)\left(\mathrm{t}_{2} * \alpha\right)\right\} \cdot \gamma=\max \left\{{ }_{\gamma}^{M} \lambda_{T, I, F}\left(\Gamma\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \alpha\right)\right)\right), \lambda_{T, I, F}\left(\Gamma\left(\mathrm{t}_{2} * \alpha\right)\right)\right\} \cdot \gamma=$ $\left.\max \left\{\lambda_{T, l, F}\left(\Gamma\left(\mathrm{t}_{1} * \alpha\right) * \Gamma\left(\mathrm{t}_{2} * \alpha\right)\right), \lambda_{T, I, F}\left(\Gamma\left(\mathrm{t}_{2} * \alpha\right)\right)\right\}=\max \left\{\lambda_{T, I, F}\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right), \lambda_{T, I, F}\left(\mathrm{t}_{2} * \beta\right)\right\} \cdot \gamma=$ $\left.\max \left\{\lambda_{T, I, F}\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right) \cdot \gamma, \lambda_{T, I, F}\left(\mathrm{t}_{2} * \beta\right) \cdot \gamma\right\}=\max \left\{{ }_{\gamma}^{M} \lambda_{T, l, F}\left(\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right),{ }_{\gamma}^{M} \lambda_{T, I, F}\left(\mathrm{t}_{2} * \beta\right)\right\}$. Hence, ${ }_{\gamma}^{M} \mathrm{H}=\left({ }_{\gamma}^{M} H_{T, I, F},{ }_{\gamma}^{M} \lambda_{T, I, F}\right)$ is a NCNID of $Y$.

## 5. $r$-Multiplication of Cartesian Product

Theorem 5.1. Let ${ }_{\gamma}^{M} \mathrm{H}=\left({ }_{\gamma}^{M} H_{T, I, F},{ }_{\gamma}^{M} \lambda_{T, I, F}\right)$ and ${ }_{\gamma}^{M} \mathrm{~F}=\left({ }_{\gamma}^{M} F_{T, I, F},{ }_{\gamma}^{M} \mu_{T, I, F}\right)$ are NCNIDs of $X$ and $Y$ respectively. Then ${ }_{\gamma}^{M} \mathrm{H} \times{ }_{\gamma}^{M} \mathrm{~F}$ is a neutrosophic cubic normal ideal of $X \times Y$.

Proof. For any $(\mathrm{t}, \mathrm{t}) \in X \times Y$ and $\alpha, \beta \in[0,1]$. We have $\left({ }_{\gamma}^{M} H_{T, L, F} \times{ }_{\gamma}^{M} F_{T, L, F}\right)(0,0)=\gamma .\left(H_{T, L, F} \times F_{T, L, F}\right)(0,0)=$ $\gamma \cdot \operatorname{rmin}\left\{H_{T, l, F}(0), F_{T, l, F}(0)\right\} \geq \gamma \cdot \operatorname{rmin}\left\{H_{T, l, F}(\mathrm{t} * \alpha), F_{T, I, F}(\mathrm{t} * \beta)\right\}=\operatorname{rmin}\left\{H_{T, L, F}(\mathrm{t} * \alpha) \cdot \gamma, F_{T, I, F}(\mathrm{t} * \beta) \cdot \gamma\right\}=$ $\operatorname{rmin}\left\{{ }_{\gamma}^{M} H_{T, l, F}(\mathrm{t} * \alpha),{ }_{\gamma}^{M} F_{T, l, F}(\mathrm{t} * \beta)\right\}=\quad\left({ }_{\gamma}^{M} H_{T, l, F} \times{ }_{\gamma}^{M} F_{T, l, F}\right)(\mathrm{t} * \alpha, \mathrm{t} * \beta)$ and $\quad\left({ }_{\gamma}^{M} \lambda_{T, l, F} \times{ }_{\gamma} \mu_{T, l, F}\right)(0,0)=$ $\gamma .\left(\lambda_{T, l, F} \times \mu_{T, I, F}\right)(0,0)=\gamma \cdot \max \left\{\lambda_{T, l, F}(0), \mu_{T, l, F}(0)\right\} \leq \gamma \cdot \max \left\{\lambda_{T, l, F}(\mathrm{t} * \alpha), \mu_{T, l, F}(\mathrm{t} * \beta)\right\}=\max \left\{\lambda_{T, l, F}(\mathrm{t} *\right.$ $\left.\alpha) . \gamma, \mu_{T, l, F}(\mathrm{t} * \beta) . \gamma\right\}=\max \left\{{ }_{\gamma}^{M} \lambda_{T, l, F}(\mathrm{t} * \alpha),{ }_{\gamma}^{M} \mu_{T, I, F}(\mathrm{t} * \beta)\right\}=\left({ }_{\gamma}^{M} \lambda_{T, l, F} \times{ }_{\gamma} \mu_{T, L, F}\right)(\mathrm{t} * \alpha, \mathrm{t} * \beta)$.

Let $\left(\mathrm{t}_{1}, \mathrm{t}_{1}\right),\left(\mathrm{t}_{2}, \mathrm{t}_{2}\right) \in X \times Y$ and $\alpha, \beta \in[0,1]$. Then $\left({ }_{\gamma}^{M} H_{T, l, F} \times{ }_{\gamma}^{M} F_{T, I, F}\right)\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right)=\gamma .\left(H_{T, L, F} \times F_{T, I, F}\right)\left(\mathrm{t}_{1} *\right.$ $\left.\alpha, t_{1} * \beta\right)=\gamma \cdot r \min \left\{H_{T, l, F}\left(t_{1} * \alpha\right), F_{T, I, F}\left(t_{1} * \beta\right)\right\} \geq \gamma \cdot r m i n\left\{r m i n\left\{H_{T, I, F}\left(\left(t_{1} * \alpha\right) *\left(t_{2} * \alpha\right)\right), H_{T, I, F}\left(t_{2} *\right.\right.\right.$ $\left.\alpha)\}, \operatorname{rmin}\left\{F_{T, I, F}\left(\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right), F_{T, I, F}\left(\mathrm{t}_{2} * \beta\right)\right\}\right\}=\quad \gamma \cdot \operatorname{rmin}\left\{r \min \left\{H_{T, l, F}\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \alpha\right)\right), F_{T, l, F}\left(\left(\mathrm{t}_{1} * \beta\right) *\right.\right.\right.$ $\left.\left.\left.\left(\mathrm{t}_{2} * \beta\right)\right)\right\}, r \min \left\{H_{T, I, F}\left(\mathrm{t}_{2} * \alpha\right), F_{T, I, F}\left(\mathrm{t}_{2} * \beta\right)\right\}\right\} \quad=\gamma \cdot r \min \left\{\left(H_{T, I, F} \times F_{T, I, F}\right)\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \alpha\right),\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} *\right.\right.\right.$ $\left.\beta)),\left(H_{T, l, F} \times F_{T, L, F}\right)\left(\left(\mathrm{t}_{2} * \alpha\right),\left(\mathrm{t}_{2} * \beta\right)\right)\right\}=\operatorname{rmin}\left\{\left(H_{T, l, F} \times F_{T, l, F}\right)\left(\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right)\right) . \gamma,\left(H_{T, l, F} \times\right.\right.$ $\left.\left.F_{T, l, F}\right)\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right) . \gamma\right\}=r \min \left\{\left({ }_{\gamma}^{M} R_{T, I, F} \times{ }_{\gamma}^{M} F_{T, L, F}\right)\left(\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right)\right),\left({ }_{\gamma}^{M} R_{T, L, F} \times{ }_{\gamma}^{M} F_{T, L, F}\right)\left(\mathrm{t}_{2} *\right.\right.$ $\left.\left.\alpha, t_{2} * \beta\right)\right\} \quad$ and $\quad\left({ }_{\gamma}^{M} \lambda_{T, l, F} \times{ }_{\gamma}^{M} \mu_{T, l, F}\right)\left(t_{1} * \alpha, t_{1} * \beta\right)=\gamma .\left(\lambda_{T, l, F} \times \mu_{T, I, F}\right)\left(t_{1} * \alpha, t_{1} * \beta\right)=\gamma \cdot \max \left\{\lambda_{T, l, F}\left(t_{1} *\right.\right.$ $\left.\alpha), \mu_{T, I, F}\left(\mathrm{t}_{1} * \beta\right)\right\} \leq \gamma . \max \left\{\max \left\{\lambda_{T, l, F}\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \alpha\right)\right), \lambda_{T, l, F}\left(\mathrm{t}_{2} * \alpha\right)\right\}, \max \left\{\mu_{T, I, F}\left(\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} *\right.\right.\right.\right.$
$\left.\left.\beta)), F_{T, I, F}\left(\mathrm{t}_{2} * \beta\right)\right\}\right\} \quad=\gamma \cdot \max \left\{\max \left\{\lambda_{T, I, F}\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \alpha\right)\right), \mu_{T, l, F}\left(\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right)\right\}, \max \left\{\lambda_{T, I, F}\left(\mathrm{t}_{2} *\right.\right.\right.$ $\left.\left.\alpha), \mu_{T, l, F}\left(\mathrm{t}_{2} * \beta\right)\right\}\right\} \quad=\gamma \cdot \max \left\{\left(\lambda_{T, l, F} \times \mu_{T, l, F}\right)\left(\left(\mathrm{t}_{1} * \alpha\right) *\left(\mathrm{t}_{2} * \alpha\right),\left(\mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \beta\right)\right),\left(\lambda_{T, l, F} \times \mu_{T, l, F}\right)\left(\left(\mathrm{t}_{2} *\right.\right.\right.$ $\left.\left.\alpha),\left(\mathrm{t}_{2} * \beta\right)\right)\right\}=\max \left\{\left(\lambda_{T, l, F} \times \mu_{T, l, F}\right)\left(\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right)\right) \cdot \gamma,\left(\lambda_{T, I, F} \times \mu_{T, I, F}\right)\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right) \cdot \gamma\right\}=$ $\max \left\{\left({ }_{\gamma}^{M} \lambda_{T, I, F} \times{ }_{\gamma}^{M} \mu_{T, I, F}\right)\left(\left(\mathrm{t}_{1} * \alpha, \mathrm{t}_{1} * \beta\right) *\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right)\right),\left({ }_{\gamma}^{M} \lambda_{T, l, F} \times{ }_{\gamma}^{M} \mu_{T, I, F}\right)\left(\mathrm{t}_{2} * \alpha, \mathrm{t}_{2} * \beta\right)\right\}$. Hence, ${ }_{\gamma}^{M} \mathrm{H} \times{ }_{\gamma}^{M} \mathrm{~F}$ is a neutrosophic cubic normal ideal of $X \times Y$.

Theorem 5.2. Let ${ }_{\gamma}^{M} \mathrm{H}=\left({ }_{\gamma}^{M} H_{T, I, F},{ }_{\gamma}^{M} \lambda_{T, I, F}\right)$ and ${ }_{\gamma}^{M} \mathrm{~F}=\left({ }_{\gamma}^{M} F_{T, L, F},{ }_{\gamma}^{M} \mu_{T, L, F}\right)$ are two $\gamma$-multiplications of neutrosophic cubic closed normal ideals of $X$ and $Y$ respectively. Then ${ }_{\gamma}^{M} \mathrm{H} \times{ }_{\gamma}^{M} \mathrm{~F}$ is a NCCNID of $X \times Y$.

Proof. By Proposition 3.1 and Theorem 5.1, ${ }_{\gamma}^{M} \mathrm{H} \times{ }_{\gamma}^{M} \mathrm{~F}$ is NCNID. Now, $\left({ }_{\gamma}^{M} H_{T, L, F} \times{ }_{\gamma}^{M} F_{T, I, F}\right)((0,0) *(\mathrm{t} * \alpha, \mathrm{t} * \beta))=$ $\left(H_{T, l, F} \times F_{T, I, F}\right)((0,0) *(\mathrm{t} * \alpha, \mathrm{t} * \beta)) \cdot \gamma=\left(H_{T, l, F} \times F_{T, \mathrm{I}, F}\right)(0 *(\mathrm{t} * \alpha), 0 *(\mathrm{t} * \beta)) \cdot \gamma=\gamma \cdot \operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} *\right.$ $\left.\alpha)), \mathrm{F}_{\mathrm{T}, \mathrm{I},}(0 *(\mathrm{t} * \beta))\right\} \geq \gamma \cdot \operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha), \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}=\operatorname{rmin}\left\{\mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha) . \gamma, \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta) \cdot \gamma\right\}=$ $\left.\operatorname{rmin}\left\{{ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \alpha),{ }_{\gamma}^{\mathrm{M}} \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \mathrm{t} * \beta\right)\right\}=\left({ }_{\gamma}^{\mathrm{M}} \mathrm{H}_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times{ }_{\gamma}^{\mathrm{M}} \mathrm{F}_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(\mathrm{t} * \alpha, \mathrm{t} * \beta) \quad$ and $\quad\left({ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times{ }_{\gamma}^{\mathrm{M}} \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)((0,0) *(\mathrm{t} * \alpha, \mathrm{t} *$ $\beta))=\left(\lambda_{\mathrm{T}, \mathrm{I} \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)((0,0) *(\mathrm{t} * \alpha, \mathrm{t} * \beta)) \cdot \gamma=\left(\lambda_{\mathrm{T}, \mathrm{I} \mathrm{F}} \times \mu_{\mathrm{T}, \mathrm{I} \mathrm{F}}\right)(0 *(\mathrm{t} * \alpha), 0 *(\mathrm{t} * \beta)) \cdot \gamma=\gamma \cdot \max \left\{\lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(0 *(\mathrm{t} *\right.$ $\alpha)$ ), $\left.\mu_{\mathrm{T}, \mathrm{IF}}(0 *(\mathrm{t} * \beta))\right\} \leq \gamma \cdot \max \left\{\lambda_{\mathrm{T}, \mathrm{IF}}(\mathrm{t} * \alpha), \mu_{\mathrm{T}, \mathrm{IF}}(\mathrm{t} * \beta)\right\}=\max \left\{\lambda_{\mathrm{T}, \mathrm{IF}}(\mathrm{t} * \alpha) . \gamma, \mu_{\mathrm{T}, \mathrm{IF}}(\mathrm{t} * \beta) \cdot \gamma\right\}=\max \left\{{ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} *\right.$ $\left.\alpha),{ }_{\gamma}^{\mathrm{M}} \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}(\mathrm{t} * \beta)\right\}=\left({ }_{\gamma}^{\mathrm{M}} \lambda_{\mathrm{T}, \mathrm{I}, \mathrm{F}} \times{ }_{\gamma}^{\mathrm{M}} \mu_{\mathrm{T}, \mathrm{I}, \mathrm{F}}\right)(\mathrm{f} * \alpha, \mathrm{t} * \beta)$. Hence, ${ }_{\gamma}^{\mathrm{M}} \mathrm{H} \times{ }_{\gamma}^{\mathrm{M}} \mathrm{F}$ is a neutrosophic cubic closed normal ideal of $\mathrm{X} \times \mathrm{Y}$.

## 6. Conclusion

In this paper, the notion of $\gamma$-multiplication of neutrosophic cubic set was introduced and $\gamma$-multiplication was studies by several useful results. This study will provide the base for further work like t-neutrosophic soft cubic and intuitionistic soft cubic set etc
