## SMARANDACHE REVERSE AUTO CORRELATED SEQUENCES AND SOME FIBONACCI DERIVED SMARANDACHE SEQUENCES

(Amarnath Murthy, S.E.(E\&T), WLS, Oil and Natural Gas Corporation Ltd., Sabarmati, Ahmedabad,-380005 INDIA. )

Let $a_{1}, a_{2}, a_{3}, \ldots$ be a base sequence. We define a Smarandache Reverse Autocorrelated Sequence (SRACS) $b_{1}, b_{2}, b_{3}, \ldots$ as follow :
$b_{1}=a_{1}^{2}, b_{2}=2 a_{1} a_{2}, b_{3}=a^{2}{ }_{2}+2 a_{1} a_{3}$, etc. by the following transformation
n
$b_{n}=\Sigma \quad a_{k} \cdot a_{n-k+1}$
$\mathrm{k}=1$
and such a transformation as Smarandache Reverse Auto Correlation Transformation (SRACT)

We consider a few base sequences.
(1) $1,2,3,4,5, \ldots$
i.e. ${ }^{1} \mathrm{C}_{1},{ }^{2} \mathrm{C}_{1},{ }^{3} \mathrm{C}_{1},{ }^{4} \mathrm{C}_{1},{ }^{5} \mathrm{C}_{1}, \ldots$

The SRACS comes out to be
1, 4, $10,20,35$, ... which can be rewritten as
i.e. ${ }^{3} \mathrm{C}_{3}, \quad{ }^{4} \mathrm{C}_{3}, \quad{ }^{5} \mathrm{C}_{3}, \quad{ }^{6} \mathrm{C}_{3}, \quad{ }^{7} \mathrm{C}_{3}, \ldots$ we can call it SRACS(1)

Taking this as the base sequence we get $\operatorname{SRACS}(2)$ as
$1,8,36,120,330$, . . which can be rewritten as
i.e. ${ }^{7} \mathrm{C}_{7},{ }^{8} \mathrm{C}_{7}, \quad{ }^{9} \mathrm{C}_{7}, \quad{ }^{10} \mathrm{C}_{7}, \quad{ }^{11} \mathrm{C}_{7}, \ldots$. Taking this as the base sequence we get SRACS(3) as

1, 16, 136, 816, 3876,
i.e. ${ }^{15} \mathrm{C}_{15}, \quad{ }^{16} \mathrm{C}_{15}, \quad{ }^{17} \mathrm{C}_{15}, \quad{ }^{18} \mathrm{C}_{15}, \quad{ }^{19} \mathrm{C}_{15}, \ldots$,

This suggests the possibility of the following:
conjecture-I
The sequence obtained by ' $n$ ' times Smarandache Reverse Auto Correlation Transformation (SRACT) of the set of natural numbers is given by the following:

SRACS(n)

$$
{ }^{\mathrm{h}-1} \mathrm{C}_{\mathrm{h}-1}, \quad{ }^{\mathrm{h}} \mathrm{C}_{\mathrm{h}-1}, \quad{ }^{\mathrm{h}+1} \mathrm{C}_{\mathrm{k}-1}, \quad{ }^{\mathrm{k}+2} \mathrm{C}_{\mathrm{h}-1}, \quad{ }^{\mathrm{b}+3} \mathrm{C}_{\mathrm{h}-1}, \ldots \text { where } \mathrm{h}=2^{\mathrm{n}+1}
$$

(2) Triangular number as the base sequence:
$1,3,6,10,15, \ldots$
i.e. ${ }^{2} \mathrm{C}_{2},{ }^{3} \mathrm{C}_{2},{ }^{4} \mathrm{C}_{2},{ }^{5} \mathrm{C}_{2},{ }^{6} \mathrm{C}_{2}, \ldots$

The SRACS comes out to be
1, 6, $21,56,126$, . . which can be rewritten as
i.e. ${ }^{5} \mathrm{C}_{5}, \quad{ }^{6} \mathrm{C}_{5}, \quad{ }^{7} \mathrm{C}_{5}, \quad{ }^{8} \mathrm{C}_{5}, \quad{ }^{9} \mathrm{C}_{5}, \ldots$ we can call it $\operatorname{SRACS}(1)$

Taking this as the base sequence we get $\operatorname{SRACS}(2)$ as

$$
1, \quad 12, \quad 78, \quad 364, \quad 1365, \ldots
$$

i.e. ${ }^{11} \mathrm{C}_{11},{ }^{12} \mathrm{C}_{11},{ }^{13} \mathrm{C}_{11},{ }^{14} \mathrm{C}_{11},{ }^{15} \mathrm{C}_{11}, \ldots$, Taking this as the base sequence we get $\operatorname{SRACS}(3)$ as

$$
1, \quad 24, \quad 300,2600,17550,
$$

i.e. $\quad{ }^{23} \mathrm{C}_{23}, \quad{ }^{24} \mathrm{C}_{23}, \quad{ }^{25} \mathrm{C}_{23}, \quad{ }^{26} \mathrm{C}_{23}, \quad{ }^{27} \mathrm{C}_{23}, \ldots$,

This suggests the possibility of the following
conjecture-II
The sequence obtained by ' $n$ ' times Smarandache Reverse Auto Correlation transformation (SRACT) of the set of Triangular numbers is given by

## SRACS( $\mathbf{n}$ )

$$
{ }^{\mathrm{k}-1} \mathrm{C}_{\mathrm{k}-1},{ }^{\mathrm{k}} \mathrm{C}_{\mathrm{b}-1}, \quad{ }^{\mathrm{k}+1} \mathrm{C}_{\mathrm{b}-1},{ }^{\mathrm{b}+2} \mathrm{C}_{\mathrm{k}-1},{ }^{\mathrm{k}+3} \mathrm{C}_{\mathrm{k}-1}, \ldots \text { where } \quad \mathrm{h}=3.2^{\mathbf{n}}
$$

This can be generalised to conjecture the following:

## Conjecture-III :

Given the base sequence as ${ }^{n} C_{n}, \quad{ }^{n+1} C_{n},{ }^{n+2} C_{n},{ }^{n+3} C_{n}, \quad{ }^{n+4} C_{n}, \ldots$
The SRACS( $n$ ) is given by

$$
{ }^{n-1} C_{k-1}, \quad{ }^{k} C_{k-1}, \quad{ }^{k+1} C_{b-1}, \quad{ }^{k+2} C_{n-1}, \quad{ }^{k+3} C_{n-1}, \ldots \text { where } \quad h=(n+1) .2^{n}
$$

## SOME FIBONACCI DERIVED SMARANDACHE SEQUENCES

## 1. Smarandache Fibonacci Binary Sequence (SFBS):

In Fibonacci Rabbit problem we start with an immature pair ' I ' which matures after one season to ' $\mathbf{M}$ '. This mature pair after one season stays alive and breeds a new immature pair and we get the following sequence
$\mathrm{I} \rightarrow \mathrm{M} \rightarrow \mathrm{MI} \rightarrow \mathrm{M} \mathrm{IM} \rightarrow \mathrm{M} \mathrm{IMMI} \rightarrow \mathrm{MIMMIMIM} \rightarrow$ MIMMIMIMMIMMI
If we replace $I$ by 0 and $M$ by 1 we get the following binary sequence
$0 \rightarrow 1 \rightarrow 10 \rightarrow 101 \rightarrow 10110 \rightarrow 10110101 \rightarrow 1011010110110$
The decimal equivalent of the above sequences is
$0 \rightarrow 1 \rightarrow 2 \rightarrow 5 \rightarrow 22 \rightarrow 181 \rightarrow 5814$
we define the above sequence as the SFBS
We derive a reduction formula for the general term:
From the binary pattern we observe that
$T_{n}=T_{n-1} T_{n-2}$ \{the digits of the $T_{n-2}$ placed to the left of the digits of $T_{n-1.1}$ \}
Also the number of digits in $T_{r}$ is nothing but the $r^{\text {th }}$ Fibonacci number by definition. Hence we have
$T_{\mathrm{E}}=\mathrm{T}_{\mathrm{E}-1} .2^{\mathrm{F}(\mathrm{m}-2)}+\mathrm{T}_{\mathrm{t}-2}$

## Problem: 1. How many of the above sequence are primes?

2. How many of them are Fibonacci numbers?

## (2)Smarandache Fibonacci product Sequence:

The Fibonacci sequence is $1,1,2,3,5,8, \ldots$
Take $T_{1}=2$, and $T_{2}=3$ and then $T_{n}=T_{n-1} . T_{n-2}$ we get the following sequence

In the above sequence which is just obtained by the first two terms, the whole Fibonacci sequence is inherent. This will be clear if we rewrite the above sequence as below:
$2^{1}, 3^{1}, 2^{1} 3^{1}, 2^{1} 3^{2}, 2^{2} 3^{3}, 2^{3} 3^{5}, 2^{5} 3^{8}, \ldots$
we have $\mathrm{T}_{\mathrm{n}}=2^{\mathrm{Fn}-1} \cdot 3^{\mathrm{Fu}}$
The above idea can be extended by choosing r terms instead of two only and define
$T_{n}=T_{n-1} T_{n-2} T_{n-3} \ldots T_{n-r}$ for $n>r$.

Conjecture : (1) The following sequence obtained by incrementing the sequence (A) by 1 3, 4, 7, 19, 1945, $209953 \ldots$ contains infinitely many primes.
(2) It does not contain any Fibonacci number.
